LOYOLA LOST TO MCGILL IN BENEFIT GAME

Red and White Aggregation Was Strong One

SCORE WAS 8-5

In First Game Lower Canada College Won From Westmount H. S.

Last night McGill met Loyola on the Victoria ice in a benefit hockey game, the proceeds of which will be devoted to the work of the Salvation Army. The team work on both sides was excellent and combination rushes were characteristic of all three periods. McGill was well represented, the rink being filled with spectators, quite a number of whom were university men. The Montreal West team had also a good number of "rooters." The men on both line-ups played rather for the team than the man, hence the game was extremely interesting from the spectator's point of view. For McGill, Dawes put up a fine game, and his speedy back-checking saved many times. Heney and Cully, on the defence, worked consistently, breaking up rush after rush with mechanical-like certainty. Lally took Dooner's place in the nets.

McGill started off with all the regulars in their places. Loyola took the offensive from the start but for some time were unable to score. However, Holland, after a brilliant rush, put in a swift one from the side. This first tally was followed almost immediately by another counter.

After the face McGill forced the play towards the Loyola nets. Gallery netting the first one for McGill. Shortly after the rubber went into play he again tallied. During the remaining few minutes each team scored one, so that when time was called the score stood three all.

The second period commenced with some pretty combination plays by Behan and Gallery, which were unfortunately effectively broken up by Holland and Clement. At this stage the Red and White seemed to loosen up and Flanagan, who had replaced Timmins. Shortly after Heney, securing from behind the net, and making a spectacular end to end rush, scored. Just before time Dawes tallied, making the total six.

During the last period both teams used their substitutes freely, so that the play never lagged. The first tally was one for McGill. Dawes, at (Continued on Page 2)

GOOD PRACTICE HELD BY B., W. AND F. CLUB

Increase in Attendance at Workout Held Last Night

There was a good turnout at the boxing practice last night, and although late in starting, a very successful workout was held. The men were first put through the drill of blows and counters, and then, under Mr. Smith's direction, practised some fast shadow boxing. They were then paired off, according to weight and height, and tried to put instructions into practical effect in short bouts. Many of the members are showing great improvement and the new men are rapidly getting into form. It is very desirable that all the members should be out to all the following practices in order to get in in time for the smoker, which will be held in the near future. The next practice will be held at 5.15 on Tuesday.

LIEUT. ACTON RETURNS

A welcome visitor at the Union yesterday was Lieut. J. Acton, a former member of Arts '20. Lieut. Acton went overseas in 1917 in the R.A.F. He was wounded in May, 1918, being shot down from a height of 1,400 feet by anti-aircraft guns.

He expects to resume his course at McGill in the near future, though at present he is still undergoing hospital treatment.

WHAT'S ON

To-day.

2.00 p.m.—Meeting at R.V.C. of executive of Graduating Years in Arts, Science and Law, and R. V. C.

2.30 p.m.—Inter-Faculty Basketball—Science vs. Medicine.

5.00 p.m.—Chemical Society Meet.

5.00 p.m.—Meeting of the Ski Club.

5.00 p.m.—Meeting of the Swimming Club in the Union.

8.30 p.m.—Union House Committee Formal Dance.

Coming.

MANY BOOKS WRITTEN BY MCGILL PROFS.

List of Publications by Members of the Staff

IN ANNUAL REPORT

Many Medical and Scientific Subjects were Treated During Past Year

The annual report of the Governors, Principal and Fellows for the year 1917-1918 has been published, and includes the following list of the publications by the members of the staff during the year ending August 31st, 1918:

Abbott, Maude E.

"The Need of an Army and Navy Medical Museum in Canada as a part of the Army Medical Service." Canadian Medical Journal, January, 1913, p. 50.

"Acute Enteritis of Infancy, Syphilis and Tuberculous Pneumonia." Canadian Medical Journal, March, 1918, p. 278.

"The Determination of Basal Metabolism by the Respiratory-Valve and Spirometer Method of Indirect Calorimetry, with an Observation on a Case of Polycythemia with Splenomegaly." Canadian Medical Journal, June, 1918, p. 431.

"The Great War Exhibit at the Royal College of Surgeons of England, as Reflected in a Hand-book by Dr. Arthur Keith." Bulletin VII, International Association of Medical Museums, May, 1918, p. 11.

"The British Circular Memorandum for the Collection of War Specimens." Bulletin VII, International Association of Medical Museums, May, 1918, p. 15.

"On the Technique of Obtaining Samples of Alveolar Air for Estimation of the Carbon Dioxide Tension, with Especial Reference to the Roth Modification of the Plech-Higgins Method." Bulletin VII, International Association of Medical Museums, May, 1918, p. 60.

"Report of the Meeting of the American and Canadian Section of the International Association of Medical Museums." Bulletin VII, International Association of Medical Museums, May, 1918, p. 76.

"The Irritable Heart of Soldiers and the Hampstead Heart Hospital." Bulletin VII, International Association of Medical Museums, May, 1918, p. 166.

"Special War Bulletin of the International Association of Medical Museums." (With A. S. Warthoff, M.D.) (Continued on Page 4)

MCGILL AQUATIC TEAM HOLDS FINAL WORKOUT

Chances Good for Swimming Club to Win Many Honours

Yesterday afternoon the McGill Swimming Club held a practice which will probably be the last before the M.A.A.A. Aquatic Meet, next Wednesday. The workout was very successful, both from the point of view of numbers and of ability. Although most of the men who will represent McGill next week are amateurs at the racing game, H. Fisk, the coach, hopes that the team will bring back most of the laurels to be won.

Among the new men, Marcell Gabor and Bob Stanger both showed up exceedingly well, and will prove to be very valuable members of the team. G. Webster, R. Dastable and R. H. Patten showed their usual form, and the hopes of the McGill men centre mostly around these five, together with H. Fisk. Among the others present the following were the most promising: D. Lyall, J. Notman, F. Williams, MacDougal. With all this promising material the college team ought to carry off most of the honours, and once again bring McGill into the foreground in aquatic circles.

The practice yesterday consisted of time trials, relay races, diving, 25 yds. backstroke, and ended with a short water polo practice. In the latter, a number of very promising newcomers were discovered. All of the men (Continued on Page 2)

DANCE AT UNION TO-NIGHT

THE UNION DANCE.

To-night the first formal dance at the University since 1914 will take place in the ballroom of the Union. During the past four years formal affairs of any nature whatsoever have been eliminated from the curriculum. In a time when everyone's efforts were directed towards the winning of the war and when thousands of our brave men, even McGill's sons, were fighting for their lives, it was, indeed, fitting that it should have been so.

To-day with the dawn of peace and the beginning of a new era, social conditions naturally gravitate to that state which was pre-existent. McGill has not been an exception, and consequently the dance to be given to-night under the auspices of the Union House Committee has been welcomed by the students generally, as a herald of a return of former social activities.

Everything points to the success of the evening, as the proposed arrangements have been completed to the last detail and few tickets remain unsold. One thing is vital, or let us say one thing is fatal, and that is the formation of cliques. Time and time again it has been remarked that such a condition has been noticeable at the University. Taking this for granted, the main object of the social evening, which is primarily to bring about a meeting between various groups of students, has been defeated. If the scientists are not going to mingle with their co-workers in medicine, a social condition for which we are striving at McGill will not materialize. This should ever be kept in view by the men who are in the habit of attending such events.

On the other hand a number of men will be seen to-night making new acquaintances, chatting with the chaperones, and making themselves generally agreeable to anyone with whom they come into contact. These are the men who really enjoy the dance, and derive a benefit from it, and who lend to the affair its atmosphere of gaiety and charm. Be one of the latter.

LOYOLA LOST TO MCGILL IN BENEFIT GAME

(Continued From Page 1)

ter a pretty individual rush, gave Timmins an impossible one. During the next few minutes Loyola tallied twice, and Behan, just before time, slipped in another for McGill. Score 8-5.

The following are the line-ups and summary:

McGill. Loyola.
Lally.....Goal.....Timmins
Cully.....Defence.....Holland

Third Period.
10—McGill.....Dawes.....
11—Loyola.....Loneragan.....
12—Loyola.....Lamarre.....
13—McGill.....Behan.....

In the first game, between Lower Canada College and Westmount High School, Lower Canada managed to win by the score of 4-3. The game

was very close throughout, and it was only by the superior combination of the Notre Dame de Grace boys that they managed to win out.

In the first period, Westmount High opened up with several fine rushes which netted them two goals, but after several minutes of close play Lower Canada came back and managed to put one into the nets. In this period generally Westmount High had the better of the play. This was due rather to individual rushes than to team work.

In the second period, however, Lower Canada College had much the better of the play, scoring three goals to their opponents' one, thus giving them the game by the odd goal in seven. They exhibited better team work than the Westmount boys, most of their goals being scored on combination plays.

The line-ups and summary are as follows:

Westmount H. S. Lower Canada.
Huff.....Goal.....Brown
Carmen.....Defence.....Hutchison
Emo.....Defence.....Robertson
Nicholson.....Forwards.....Williamson
Glickman.....Forwards.....Plow

R. V. C. SECTION

SIR WILFRID LAURIER

(Rev. George Scott.)

And so he died and went unto his place. His fitting place among the immortal dead.
In future years let only this be said: He bore his honours with a matchless grace.

For he was great, he moved amid our strife, And sordidness, so proud, so calm, so free, Even as a mountain overlooks the sea, Unmoved, untroubled by its fretful life.

Yes, he was great, his country and his God Had all his love, his country loved him well, While future years his high renown shall swell, Sweetly he'll sleep beneath the fragrant sod.

And on his tombstone let white lilies rest, Nor purer they than was his stainless heart; Full well in troublous times he bore his part, Nor to dishonour veiled his knightly crest.

His was the statesman's vision clear and strong, By devious ways his ends he would not gain; Too chivalrous he was for causeless pain, So great, he scorned to do a foe's man wrong.

He holds high place among the wise and great Who mould the genius of our stubborn race; He tempered strength by his fair Gallic grace, Evolving love from fratricidal hate. —St. John Times.

THE SYMBOL OF THE WEST

The symbol of the West is a new clean city, the symbol of a new life with a broader outlook. To the average Easterner the man from the prairies has a typical breezy manner, with a broad cosmopolitan view of life, as though he had imbibed a little of the expanse and freedom of the broad plains. The familiar phrase of the soldier that his comrade has "gone West" is a beautiful one. Over in Europe, of course, the West signifies home to the Canadians, and so when they fall in battle, they simply use the same term for their heavenly home. May not this be taken in the sense that they have gone where everything is understood and grasped in a wider sense than that of which our human minds are capable? How much more comfort, apart from its beauty, there is in this term than in the apparently synonymous one, "napoosed"—"he is no more."

From the beginning of history, the West has denoted expansion. The Greek migrated to Italy with the self-same spirit of adventure and freedom which a thousand years later drove the Europeans forth to the discovery of this great continent of ours. It seems to-day as though every nook and cranny of this globe has been discovered, yet the spirit still lives. Prof. James suggests that the human race apply this energy to the wide fields opening in all branches of intellectual and scientific research that they may reach the realms of freedom of thought and action. Let us take care that we do not stay firmly in a rut, but that we expand and enlarge our outlook while we have the opportunity—in other words, that we move West.

BILLY SUNDAY'S EFFICIENCY.

Billy Sunday gives his own reasons why he is capable of doing such a tremendous amount of work and of exercising such phenomenal powers in the "Physical Culture Magazine." "I work when I work—and when I am through I rest. When my work is ended—it is ended. "I never keep it with me. I do all that I can, and the best I can; always and everywhere. "I never spare myself when I am on the job—but I never take the job to bed. "A good many men never get done with the day's work. "They keep doing it over and over again—instead of getting themselves ready for the next day. "I believe in hitting the line hard—when you are doing the hitting. "If you get through the goal, yell about it, if you want to, for all you're worth. "But if you don't, it is a waste of energy to think about how you could have done better if you had only acted differently. "My policy is to try to get myself into condition to buck the line harder—the next time I have a chance. "My job is trying to show men and women the way to salvation. "I have given every ounce of myself—every beat of my heart, ever atom

of strength in my voice to that job. "But I could never get very far with it if I kept going over lost ground instead of seeing new ground ahead—and doing my best to make a better record next time."

MISS SHEDLOCK SPEAKS TO R.V.C. RESIDENTS

A delightful half-hour was spent by the house girls on Thursday evening, when Miss Shedlock kindly consented to tell a few stories. By special request she told in her charming manner Hans Andersen's story, "Scandal in the Poultry Yard." This is the story of a little white hen who, chancing to lose one of her feathers was heard to remark that it would make her all the more handsome. The story spread from poultry-yard to dove-cote, added to and enlarged upon by each succeeding narrator. The hens passed it to the owls, and the owls to the pigeons, who, in their turn, repeated to the cock of the very poultry-yard to which the little white hen belonged. The version of the story that he crowed forth was the atrocious scandal of how five hens plucked out all their feathers to make themselves handsome in the eyes of the cock, and then had fallen upon each other in rage and jealousy and pecked each other to death. The little white hen did not recognize the story, and remarked, "I believe there are such hens, and the story should be put in the paper to punish them," for she was a respectable little hen. Thus one little feather can become five large hens.

The next story was to illustrate that people are apt to carry their prejudices through life and see everything through them. How two frogs in Japan, living in Kioto and Osaka, respectively, simultaneously decided that they would like to see a little more of the world. These towns are connected directly by one long road, and so the two frogs, having set out on the same day, one day suddenly arrived face to face. After exchanging mutual confidences, they decided that it would be easier to stand on their hind legs, and by placing their hands on each other's shoulders, each would get an excellent view of the city he was journeying towards. Unfortunately, when the frogs stood up their eyes were at the back of their heads, and so, although their noses were pointing towards the new world, the eyes looked upon their native heath. Back to earth and both frogs agreed that had they known that the foreign town was so like their own, they would never have set out at all. Then each frog went home contentedly, believing that all towns were alike. So you see it all depends on your point of view.

Should R.V.C. Students Speak on the Street?

The following has been received by the R.V.C. editors. What do you think about it?

"In a certain college, a tiny button is worn by each student, which entitles him to recognition by a fellow student. Some members of R.V.C. wear a bit of the 'Red and White.' This ribbon is, as a rule, only conspicuous to McGill students. Should not all members of R.V.C. wear a McGill ribbon?"

"I met a freshette on the street car the other day and attempted to speak, pointing—by way of explanation—to my Dally, which matched the one sticking out of her books. She may be very well excused for not knowing me, but was she right in turning her back? Is she at fault, or is it the college spirit?"

"It seems very hard for the upper classes to know the first year girls, especially those living outside the house. It is all very well that in coming, students should be taught to give place to those who have been longer in the college halls, but should they not be taught to recognize R.V.C. students at all times? You may not desire, and could not be intimate friends with all the girls in college, but you can exchange a friendly greeting. All classes and all girls are, as students, working for the same purpose. College spirit can only exist with unity, and that unity will only come when at all times we are ready and eager to give a sister student a hearty hand-grip. Who should point the way to such a college spirit? Is it the sophomores to the incoming year, or is it the Undergraduate Society to the whole student body? In any case, it is time it was done."

NOTICES.

Red Cross. Please remember to-day is the last day of the month, and all work must be in. All work taken out must be returned by March 15.

Partials. Remember the Red Cross work is due this week. Those who have not done the work should pay their fines (25c) promptly. There is still a number of fines owing from last month.

THE UNKNOWN DEAD.

(Charles Hanson Towne, in Saturday Evening Post.)
They loved the English hedgerows And scented English lanes; They loved the sunlight on the downs And the soft English rains. And now—they sleep in Flanders Or where the sad Marne flows, A bleak white cross above their heads; Their names, ah, no one knows!

They loved the life of London. With lights that gleamed like pearls. And theatres and taverns And rosy English girls. Their youth was a brief glory That sped too swiftly by: They left their schools and cricket And came out here—to die.

And some were shining poets, And some were simple boys Who loved the Surrey fields and all Substantial English joys. From Eton and from Oxford, From many an English town, They came to save a world from shame And lay their young lives down.

In some celestial garden Perhaps they sit to-day And laugh as they once loved to laugh. Play as they used to play. 'Tis we who weep for young lads gone: But they—they are not dead. Though simple crosses stand above Each brave young English head.

They loved, and are contented On windy wastes to sleep. Yet when the English daisies Begin to smile and creep, Pluck them and take them over To many a lonely grave; For they loved English flowers, These young, and bright, and brave.

INTERESTING IS TRAINING FOR AVIATORS

First Flights When Aviator "Feels Feet"

MACHINE GUNNERY

Salvage of Wrecked Planes Important Branch of R. A. F. Life

The first flights are taken in company with an instructor on a two-seater machine, but when the young aviator gets confidence and "feels his feet" in the air he is allowed to do what he likes for a short time, and then he must pass the various tests laid down, including the swooping down to a low height, firing so many rounds of his machine gun, the dropping of a dummy bomb, and soaring again to a given height. The satisfactory accomplishment of this may be said to complete the aviator's training, and he has then only to practise and become thoroughly efficient before he is ready for service with the air force in the field. At these training depots the cadet puts into actual practice all the knowledge he has gained throughout his previous training, and the manner in which he handles his plane and is able to fire, spot targets, read signals, and keep his engines in trim, shows how he has benefited by the instruction given him.

The Royal Air Force is very particular about the soundness of the machines in which its pilots and observers fly, and accordingly there are a number of aircraft acceptance parks throughout the country where the machines are received from the various contractors and then tested in detail, numbered, catalogued, and distributed. To each machine and engine is supplied a log book, so that throughout the whole course of its career everything in connection with the plane and the engine can come up for review. The history of each is entered in a separate log book, and is available for inspection at all times, and when in use for flying the aviator must record the behavior of his engine and plane, and, on his landing, the events of each flight. In this way only is it possible to work out the best type of plane and engine, and to this thoroughness must be ascribed the success which attended the work of the Royal Air Force and the Independent Air Force in the field.

It is very necessary that those pilots who have the special ability of imparting knowledge to others should have special training, and for this purpose various instructors' schools have been established, where some of the finest flying in the world can be seen.

The aeroplane, or rather, its twin brother, the seaplane, has been of considerable use in patrol work, and especially in spotting the U-boats. Here again the pilots and observers receive theoretical and practical training at special seaboard stations before they take part in the actual work, and one very valuable feature of seaplane work has been the patrol of the coasts, as the aviator at even the low height of 750 or 1,000 feet has a wide area of vision, and by means of wireless telegraphy can report the happenings and doings on the particular part of the coast he is responsible for to the divisional headquarters. Seaplanes are able to travel on the surface of the sea if necessary, and there is especial care devoted to the construction of these planes, some of which are of immense size.

The war has seen the institution of a ferry service between France and England by means of large aeroplanes of the Handley-Page type. The distance between the acceptance parks in England and France, a distance of some 35 miles, can be covered in 25

minutes. A regular service is maintained whenever the conditions permit of flying, and to secure really reliable data of the weather both for this service and for the various aerodromes throughout the country, the air ministry has established its own weather bureau, so that that special kind of information which is valuable to the flying man can be collected, forecasted and distributed wherever it will be of service.

And in connection with the firing of the Lewis—or Vickers—machine gun, mention must be made of the device with which all the British aeroplanes are equipped, whereby the bullets pass safely between the blades of the revolving propeller. The device was invented by a Rumanian, acting on the basic idea of wave-lengths in wireless telegraphy, to insure the bullets, no matter how many are fired, passing between the blades of the propeller whilst it is revolving. The device is most ingenious, and care has to be taken that in each single machine it is synchronized with the revolutions of the engine. When this is once set it is impossible for a bullet to pass anywhere but between the blades. The aviator is also instructed how and when to drop his bombs on an objective, as the speed of the plane and wind, and the direction in which both are travelling, has to be taken into account, and various corrections allowed for, as well as the flight of the bomb when released. Further evidence of the thoroughness with which the Royal Air Force does its work is to be seen in the fact that it is not content with the condition of the machine guns as delivered by the various contractors for their supply, but at the school of armament it maintains its own workshops on a very large scale, in which every gun is tested, not only for defects, but for the accuracy of its working parts. After the guns have been passed by a highly skilled inspecting officer they are laid by until needed. And it is to the workshops of the Royal Air Force that the most highly skilled mechanics in the country have been taken.

Passed through the school of armament, the cadet next goes to a training depot station, and here he first flies. These are the first stages in his flight, and after learning all the theory of an aeroplane, its control lever—or, as it is familiarly called, the "joy-stick"—he has the pleasure of actually using this and all the accessory instruments.

The salvage of wrecked planes is a vast and important part of the activities of the Royal Air Force, and at practically every large center of instruction where there are workshops, or at aircraft acceptance parks, this useful work is carried on. The most important work of salvage was naturally carried on behind the lines in France and elsewhere in neutralizing the inevitable wastage of war. The

necessity for salvage and repair can be clearly recognized when it is considered that an aeroplane needs, after an average of about 22 hours in the air, though machines of the size of the Handley-Page type, the steady flyers and the most suitable for after-the-war passenger and commercial services, can be in the air for about 128 hours before they are overhauled and stripped.

Farnborough, the cradle of the Royal Flying Corps, the predecessor of the Royal Air Force, must not be forgotten. It is an immense establishment, the home of the training of airmen in wireless telegraphy, wireless telephony, photography and a host of other matters incidental to aviation, and the site of immense workshops, repair depots, and instrument-making works, covering an enormous area. The depot is so vast that a volume would be needed to describe it all; let it suffice to say that it covers almost every department of aircraft work, and is maintained in the same thoroughly efficient manner as the rest of the organization of the Royal Air Force.

Even from this brief description it will be seen that the training of an aviator, be pilot, observer or instructor, is not a light matter, and that it calls for the exercise of the highest technical skill on the part of teacher and cadet, and particularly for the art of imparting knowledge by the former.

"The Nice Little Distinctions"

You know how much of the success of any Suit or Overcoat depends on what the French call "Thenice little distinctions". It is not an extravagance to wear well-made clothes, of good materials.

In fact, it is an economy, because Fit-Reform Clothes wear so much longer, and look so much better, that their cost per season is actually less than any others you can buy.

A great many men—who come to us year after year for their clothes—have proven the economy of Fit-Reform to their complete satisfaction.

MUSIC

Next Sunday afternoon, at His Majesty's, music lovers of Montreal will have the opportunity of hearing a rising young pianist. The artist is Mischa Levitzki, who is pronounced by those who are judges of good music and good players to be the phenomenal pianist of to-day. It was only in 1916 that this young musician made his debut but already he has earned recognition on every hand.

PRESIDENT OF UNION.

A. MURRAY MCCRIMMON.

Campus Leaders.

The President of the Union, A. Murray McCrimmon, B.A., is a well-known figure about college. McCrimmon entered McGill as a double course student in Arts and Medicine, and having received his degree in the former faculty in April, 1916, he immediately enlisted in the Cyclists' Battalion, going overseas in May. He served with these in England and France during 1916 and 1917. In 1918 he was attached to the headquarters of the Canadian Corps, and for six months acted as Assistant Chemical Adviser to the Canadians. In September last, McCrimmon returned to Canada and resumed his studies at the college, joining the class of Medicine '21. He was elected to the Presidency of the Union on December 6th, and has since been active in restoring the social life that centred there in pre-war days. His genial smile needs to be seen to be appreciated.

NOTICES

R.V.C.—Law—Science—Arts.
There will be a meeting of the executives of the graduating years of the above Faculties, at the R.V.C., to-day (Friday), at 2.00 o'clock p.m.
The purpose of the meeting is to elect a committee to attend to various affairs in connection with Convocation Week.

Basketball.
The following Science men are requested to turn up for basketball game against Medicine, to-morrow, at 2.30 p.m.:

CLARK
ROOT
THOMPSON
THOMPSON
DAVIS
MARTIN

Attention, Swimmers!
There will be an important meeting of the Swimming Club this afternoon, at 5.00 o'clock, in the Union. As important business is to be transacted, a large attendance is requested.

Those men who have been turning out at the Y.M.C.A. for swimming practices are especially urged to attend, as well as the members of the water polo team.

Mandolin Club.
The Mandolin Club will hold its regular practice at Mr. Peate's Studio, at 7.30 p.m., Monday. All men are requested to turn out after having had their long holiday. The pictures will be available at the meeting.

Med. Society.
The next meeting of the Medical Society will be held on Friday evening, March 7. In addition to the usual professional lecture, there will be a discussion relative to the Memorial Tablet for the fallen students of the Faculty, and the Roll of Honour of those students from the Faculty who served overseas.

Chemical Society.
Dr. A. Stansfield will address the regular meeting of the Chemical Society, to-day, at 5.00 p.m., on "The Reduction of Iron Ores." Any who may be interested are invited to attend.

MCGILL AQUATIC TEAM HOLDS FINAL WORKOUT

(Continued From Page 1)

seemed to be in very good condition, being quite fresh even after nearly an hour of strenuous swimming.

The line-up of the McGill team will be published either in to-morrow's or Monday's "Daily." It will most probably consist of those men mentioned above, so that it is up to them to keep practising, in order that they will be in the best form possible next Wednesday.

This afternoon, at five o'clock, there will be an important meeting of the Swimming Club in the Union, and all those who have had their times taken are requested to attend, as well as all others interested in swimming or water polo. The meeting will be short, and a large attendance is requested.

First—The most central and convenient Location in Montreal.
Second—A veritable model of Sanitation in every detail of equipment.
Third—Only barbers who have made an art of their craft find employment with me. That is my standing guarantee of satisfaction.
Fourth—The FINISHING these barbers are instructed to give is as important as the shave or hair-cut itself.
Fifth—Invariable courtesy, and I do not solicit your custom for everything on the calendar.

J. W. POTVIN 163 Peel Street
COR. ST. CATHERINE. Under Tooke's.
